

# Network Installation - Configuring the License Manager

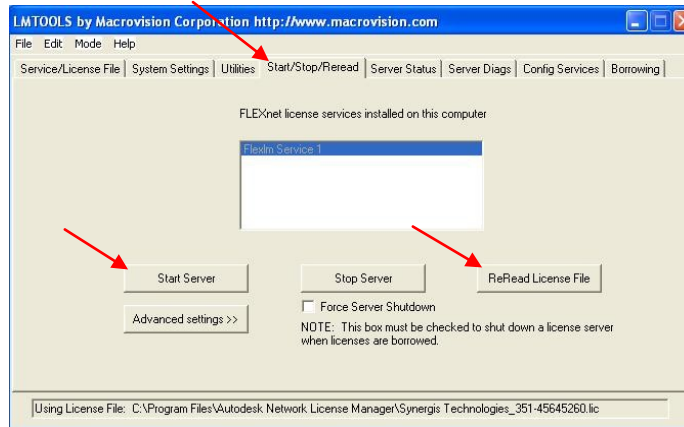

1. When you obtain your License File from Autodesk, copy it into the C:\Program Files\Autodesk Network License Manager folder. Be sure the file has a .lic extension.
2. Launch the **LMTools Utility** and click on the Config Services tab.

3. In the **Service Name** field, enter **Flexlm Service 1**
4. In the **Path to the Imgrd.exe file** field, enter or browse to the **Imgrd.exe** file in the C:\Program Files\Autodesk Network License Manager folder.
5. In the **Path to the license file** field, enter or browse to the license file in the C:\Program Files\Autodesk Network License Manager folder.
6. In the **Path to the debug log file**, enter **C:\Program Files\Autodesk Network License Manager**
7. Check the **Start Server at Power Up** and **Use Services** boxes, and then click **Save Service**.
8. Click the **Service/License File** tab and check the **Configuration using Services** button - **Flexlm Service 1** should be displayed in the box.

9. Click the **Start/Stop/Reread** tab; click the **Start Server**, and **Reread License File** buttons.

Your Autodesk products should now be able to obtain licenses from the License Manager. If there are problems, re-boot the computer and check to be sure the **lmgrd.exe** and **adskflex.exe** services are running by pressing Ctrl + Alt + Del to open the Windows Task Manager. Click on the Processes tab – they should both be listed in the Image Name column:
